

1.0 INTRODUCTION

We have recently had a fire risk assessment completed on the compound and the adjacent units which we lease and it has been noted that the current setup for monitoring of fires is insufficient as some alarms are not mains powered and all fire alarms are not monitored when the buildings are vacant.

2.0 PROPOSED SOLUTION

New fire detectors and alarm sounders are installed in the grounds compound, unit A and unit B/C. The detectors will then be linked to the intruder alarm for monitoring out of work hours.

3.0 RECOMMENDATIONS

That council agree with the need for increased monitoring for potential fires to protect council assets and reserves used to purchase and install the system. Estimated costs £2,440+VAT. These funds will need to be requested from Council from General Reserves
